(54) RECORDING METHOD

(57)Abstract:

PURPOSE: To transfer a sharp, water proof color picture on a base material by transferring a sublimable toner image, which is formed on an electrophotographic photosensitive body, on a paper, superimposing it on the highly flexible base material, and then heating it.

CONSTITUTION: An electrostatic latent image for a prepared design is formed on the electronic pointer photosensitive body or an insulated recording body; toner incorporating sublimable dye is employed as color toner used for developing the latent image; after the latent image is transferring on the plain paper, the paper is brought into contact with the flexible base material; the base material is dyed with the sublimable dye by heating the plain paper to a sublimation temperature or above from the reverse side. Thus, the prepared design can be transferred to the highly flexible base material, for example, cloth, nonwoven fabric, and Japanese paper.
